Our Long-Term Vision

Toyo Denki Seizo K.K. Contributes to the Development of Social Infrastructure Systems

Based on a firm management foundation, we help build social infrastructure systems that are considerate of the global environment through the global provision of high-quality products that integrate our exceptional motor drive technologies since establishment with our breakthrough advanced technologies.

Transportation Systems Segment

Electrical equipment for rail vehicles manufactured by the Company using its technological capability developed over 100 years covers a wide range of fields, including propulsion systems (drive systems), auxiliary power supply and door-closing units of trains, and we contribute to the maintenance and development of railway infrastructure overseas, not to mention in Japan, by pursuing safety and comfort of trains.

Current collectors

Industrial Systems Segment

The Company is extensively contributing to customers at home and abroad through general industrial machinery and equipment, testing equipment for automobile development and social infrastructure equipment that is indispensable to the daily lives of people. In addition, we address manufacturing that contributes to the prevention of global warming, while providing products manufactured through high system-building technologies that make full use of energy-saving motors, inverters, FA controllers and networks.

Information Equipment Systems Segment

In the Information Equipment Systems segment, we operate in the two fields of railway station operating equipment and remote monitoring systems, by merging advanced telecommunication technologies and mechatronics.

With regard to railway station operating equipment systems, we develop and manufacture commuter pass issuing machines that quickly became IC card compliant and portable terminal devices for conductors, and provide systems for smooth toll collection and income management system to railway operators.

Our remote monitoring systems greatly contribute to labor saving and maintenance saving of customers through realization of various equipment monitoring and position monitoring, by leveraging cloud computing.
